

RESTORE-PAK[®]

TEMPORARY POWER RESTORATION

Introducing our lightest and smallest power restoration unit RESTORE-PAK[®] 7.5kVA Kit (P80150)

SNC Manufacturing's RESTORE-PAK[®] Temporary Power Restoration System (P80150) is a compact mobile transformer unit that contains a single-phase, floating-tap transformer designed to restore power to customers who have a single-faulted conductor on 120/240V service. RESTORE-PAK[®] can be installed between the customer's meter base and transformer to restore power without immediately locating and repairing the cable fault or running temporary cable above ground.

RESTORE-PAK[®] can be ordered as a kit (P80150), which includes all parts shown above (P80151, P80152 and P80043), or each part can be ordered separately. See details on back.

RESTORE-PAK[®] IS UNIQUE IN THE INDUSTRY:

- **Lightweight:** It's the lowest weight and smallest unit on the market.
- **Convenient:** It's easy for one person to deploy and fits in the back of a truck.
- **Versatile:** Parts can be ordered together or separately.

RESTORE-PAK® can be ordered as a kit (P80150), which includes all parts shown below, or each part can be ordered separately.

Tandem Adapter Box

P80152

Weight: 22 lbs

Box can be used a stand-alone part or can accommodate two stand alone coil interconnectors shown below to reach capacity of 15kVA.

Stand Alone Coil Interconnector

P80151

Voltage: 7.5kVA per unit

Weight: 42 lbs

Note: The RESTORE-PAK® kit (P80150) comes with one unit. You can order a second stand alone coil interconnector separately (P80151) to connect both into the box shown above to reach capacity of 15kVA.

300 Amp Cord Set with Meter Head Assembly

P80043

The cord set is designed to connect the RESTORE-PAK® unit to the power terminal and neutral. Also compatible with RESTORE-LITE® 10kVA, 15kVA and 20kVA units.
